

Fleet Warranty Administration

Are you leaving "dollars on the table"?

If you are OEM approved and are performing in-house repairs, how complete are your annual warranty recoveries?

How much is it costing you to perform in-house warranty processing?

How much manpower is devoted to the warranty process, and would it make sense to adjust the staffing count if you knew you would not sacrifice efficiency?

We can help you answer the first question, which in turn will add perspective to the second question.

We are offering a FREE Inventory Analysis. You give us some basic vehicle information, which should be readily available through your Fleet Management Software System, and we will give you **our** estimate of **your** annual warranty reimbursements based on fleet warranty administration data collected since 1992.

You can compare your results with our estimate. If nothing else, it should provide a benchmark in evaluating your current process.
